MULTI DOMAIN FORCE CYBER TRAINING

CESI blends extensive experience providing Live, Virtual, Constructive (LVC) training for the kinetic force with high fidelity training for the Cyber Mission Force. As training continues to move towards a focus on the full Multi Domain Force, we are uniquely prepared to integrate and ensure readiness.

CESI builds infrastructure, platforms, applications, and processes used to train the multi domain force of the future.

CESI designed, implemented, and operates the infrastructure for the Persistent Cyber Training Environment (PCTE) prototype development and production systems.

Secure Systems Through DevSecOps

CESI's DevSecOps tools and processes empower secure continuous integration and deployment of internal and third-party software development.

- Real Security, not just compliance
- Continual and Rapid Deployments through continuous integration and continuous delivery
- Validation and deployment of patches for severe vulnerabilities in hours, not months

2710 Discovery Dr., Ste. 100, Orlando, FL 32826

WE BUILD

Scalable, modular open systems architecture solutions. With your needs in mind, our technology experts build distributed, interoperable, and upgradable training capabilities.

WE DELIVER

Solutions for complex training and education needs using modeling and simulation (M&S) enabled products and services.

WE SERVE

The military, government, education, and commercial markets, CESI develops, delivers, and sustains high-quality M&S products and serious games.
