

TrueShot AI™ FoF Drone Training

Modernizing Live Training for the Drone Threat.

An integrated drone and counter-drone ecosystem that safely replicates complex aerial engagements — delivering scalable, intelligence-rich readiness across the force.

TrueShot AI™ Force-on-Force (FoF) Drone Training brings offensive and defensive drone operations into live, non-lethal exercises with the realism of combat conditions. Full integration enables training in attack drones, c-UAS, munitions-dropping drones, and soldier-mounted counter-drone systems.

Geo-fencing and failsafes support realistic 3D engagements without risk, creating a scalable, data-rich environment that prepares units for drone-saturated conflicts with aerial threats, counter-drone tactics, and after-action review tools.

KEY FEATURES

- Conduct live offensive and defensive drone operations in safe, non-lethal training that mirrors modern battlefields.
- Attack and counter-UAS drones interact through a 5G network, GPS-tracked forces, and our Appended Sensor Package (ASP).
- Deliver scalable, data-driven training with realistic aerial engagements, full safety controls, and after-action insight.
