

TrueShot AI™ Kinetic C-UAS

Precision Power Against Aerial Threats on the Modern Battlefield.

Advanced sensing and automated tracking guides shooters quickly and accurately onto fast-moving aerial targets.

TrueShot AI™ Kinetic Counter-UAS is a portable, weapon-mounted system that enables Soldiers to kinetically defeat Group 1-2 drones using their existing small arms.

The system combines optical sensors and computer vision to track and cue targets, providing real-time guidance that improves accuracy and reduces engagement time.

KEY FEATURES

- Turns any standard rifle, shotgun, or squad automatic weapon into a counter-UAS weapon – allowing Soldiers to track and defeat drones in real time.
- Combines optical sensors and computer vision for precise target cueing and faster engagement.
- Lightweight, low-power, and easily configured for both live operations and training.
